**D. Coles, G. Bailey, R E Calvert : Introduction to Building Management** before purchasing it in order to gage whether or not it would be worth my time, and all praised Introduction to Building Management:

3 of 3 people found the following review helpful. Comprehensive Guide for Building StudentBy Wong Kian FoongThis book comprises everything from A to Z. It provide students even professional builders a quick recall/review of construction environment associated terms, elements and functions. Although, most of the subjects are mentioned and provided necessary example and explanation, there are only can be treated as a guildline. If anyone

who wanted for a more detailed explanation and case study, this may not be the one. Since the building industry is so complex and varies all the time, this books can provide a good management basic for all reletated discipline.

This is the classic practical introduction to the broad principles of building management. It is suitable for both students and practising construction professionals who are concerned with greater efficiency within the construction industry. As a general textbook for the student, the introduction covers the entire field in some depth providing a firm foundation for additional reading. The text is closely geared to the chartered Institute of Building (Member) Parts I and II examinations. The book includes examples based upon and related to working experience. It will also be found valuable by students reading for the examinations of other professional bodies in the construction industry, and by HNC/D students.

'This popular introductory book on building management has been greatly welcomed by countless hundreds of students since it was first published in 1964. Despite the wide breadth of its content, the book covers all these components in considerable depth and is well supported by many useful illustrations.' ASI Journal'Regarded by many within the construction industry as the finest volume on management available.' Construction PromoterFrom the PublisherAs a general textbook for the student, the introduction covers the entire field in some depth providing a firm foundation for additional reading. The text is closely geared to the chartered Institute of Building (Member) Parts I and II examinations. The book includes examples based upon and related to working experience. It will also be found valuable by students reading for the examinations of other professional bodies in the construction industry, and by HNC/D students.
