From the cover you'd guess it just has a slew of cute pictures of freshly born wildcats. Well yes... but that's not all. Each set of pictures is accompanied by the basics -- birth date, name, zoo -- but also far more. The endangered status of each of the species is listed with a compact yet highly literate and helpful description of the characteristics and range of the cat. By the time you're done, you or your child will know far more than you'd expect from just looking at kitty pictures.I gave this book to a somewhat precocious six-year-old who proudly read the names of each animal showing me many pictures. Because the locations of the zoos are listed, we had a chance to look at maps from around the world to see where each baby lives. It was a joyous, fun but also educational experience for us both.1 of 1 people found the following review helpful. AWWWW!!!!!!By tarnoldI LOVE this book! It is a small sized book filled with the cutest cubs!!! I love big cats and in fact plan to return to school to major in Animal Science in order to work with carnivores--big cats to be precise! But back to this book. Every page is filled with the most beautiful photos of cubs, gives information of each cub, as well as facts about each breed and the sobering fact that many of these are quickly going extinct in the wild, due to poaching, or habitat loss. How sad it would be to live in a world where these beautiful

and regal cats no longer exist! How sad too, that cubs like these may never know what living free in the wild is like! On the other hand, many are being bred in zoos and because of this we are able to see up close these precious and sweet faced cubs. They are all adorable! If you love big cats and cubs, I would definitely recommend this book! I thank the authors and photographers for publishing this. It makes a great addition to my small but growing library of nature books! 0 of 0 people found the following review helpful. Great book for all ages! By Sharon I ordered this book for my 7 y/o son who is a huge Zooborns fan and wants to be a zoologist someday. I thought it might be too juvenile for him; however, the facts on the cats keep his attention while the pictures are just stunning. Even very young children would enjoy looking through the pictures or learning the names of the various cat species. One word of note, the book is much smaller than I anticipated. I didn't read the specs on it so I was surprised when it arrived much smaller than your standard picture book (think board book size but with paper pages). It doesn't detract from the book - it was just surprising to me. Highly recommend this book to any Zooborns, animal, or big cat fan!

ZooBorns showcases the newest and cutest animal babies from accredited zoos and aquariums around the world. With interesting animal facts and background stories on the featured babies, ZooBorns illustrates the connections between zoo births and conservation initiatives in the wild.

"If a picture is worth 1,000 words, then these stunning photographs starring precious animal tykes may be priceless. The range of real-life infants featured is extraordinary in its breadth, covering such unusual zoo or aquarium residents as the crowned sifaka and the tawny frogmouth. The captivating, clear photographs pose every cub, kit and so on at its most adorable." -- "Kirkus s" About the Author Andrew Bleiman is a lifelong animal nerd who graduated from the University of Pennsylvania with a degree in English Literature and a yet to be recognized minor in Baby Animalogy. He attributes his fascination with zoology and conservation to monthly childhood trips to the Wildlife Conservation Society's Bronx Zoo. He lives in Seattle with his wife, Lillian, and daughter, Avery. Chris Eastland is a classically trained artist and freelance designer who studied and taught at the Charles H. Cecil Studios in Florence, Italy. Chris was formerly the Photography Editor for Quest Magazine. He lives in Brooklyn, New York with his girlfriend, Emilie, their cat Georgie, and their dog Holden.
